

News: New Mesh Decking

The new wire mesh decking and shelving from PSS is a versatile storage solution that has been designed with health and safety regulations in mind.

The compliant storage system lets smoke and heat rise while allowing sprinkler water to reach lower storage areas. The mesh decking converts pallet racking into shelves for smaller items without the need for any redesign or restructure within the warehouse.

The wire mesh decking features three cleverly designed supports that will not collect dust and dirt, for strength and a waterfall edge design front and rear to hold the shelves in place securely.
